

Fly-In Briefing

You are welcome to join us during our Fly-In event in the north skies!

Kiruna Airport (ESNQ) is located just a few miles east of Kiruna city and is the northernmost airport in Sweden.

Kiruna that have an population of 18 148 humans and the airport served around 200 000 passengers in 2010 and is the 12: th biggest airport in Sweden

Arrival Procedures

As Kiruna is located between the high mountains in north Sweden, the tower position is not equipped with any Radar. Therefore there are some special arrival procedures to Kiruna:

The separations between arriving aircrafts shall be 10 minutes, so expect some delays and holdings. *During this event we will probably reduce that due to the flow*

The arrival waypoints are: LAPLA, TERPA or VAGAS, or directly to the KRA (VOR) if you are not able to follow standard arrival routes.

LVP (Low visibility procedures) shall engage when RVR falls below 550 m.

The application of LVP will be announced by ATS. Under LVP conditions Aircrafts shall report Runway vacated at the stand on apron. Only one aircraft or only vehicles are allowed in the maneuvering area.

And due to the limited area of parking positions we would like you to not wait more than 10 minutes online afterwards you have parked.

Other information

Charts are mandatory during this event! You can find the charts here:
